

SolidComp's Products & Services

POST PROCESSING SERVICES

SolidComp's Post-Processing transforms raw data into intelligent, usable 2D and 3D scan formats that support design, maintenance and decision-making processes.

We also continuously maintain your data, ensuring that as new information is gathered, your virtual environment remains agile and responsive.

Your Trusted Partner

SolidComp is a full-service provider of high-quality 3D scanning solutions for industrial needs across the Nordic countries, and through our partner network, worldwide.

Our flagship product, Reality Twin™, is an exceptionally visual and precise digital twin, delivering an accurate virtual replica of industrial environments. We offer solutions for production plants, engineering firms and equipment manufacturers, enabling them to work more efficiently, safely, and with greater confidence.

CAD & BIM FORMATTING FROM POINT CLOUDS

We convert point cloud data into structured CAD and BIM models, enabling precise planning and documentation.

DEFORMATION MONITORING & CHANGE ANALYSIS

We offer deformation monitoring services that detect and analyze structural changes over time.

SIMPLE EQUIPMENT MODELING

We can create 3D representations of your machinery directly into the post processing toolkit, which can be integrated into your virtual facility models.
