

SolidComp's Products & Services

AERIAL SURVEYING AND PHOTOGRAMMETRY

Using drone-based photogrammetry, we create accurate 3D models of extensive land areas and built environments.

With SolidComp's method, we enhance the accuracy of drone imagery by combining it with multiple laser scanning techniques. Drone-based data can also be aligned with your factory's coordinate system or national coordinates for maximum reliability.

**Put your data to work
and reduce design costs
and site visits by 5–10%**

Your Trusted Partner

SolidComp is a full-service provider of high-quality 3D scanning solutions for industrial needs across the Nordic countries, and through our partner network, worldwide.

Our flagship product, Reality Twin™, is an exceptionally visual and precise digital twin, delivering an accurate virtual replica of industrial environments. We offer solutions for production plants, engineering firms and equipment manufacturers, enabling them to work more efficiently, safely, and with greater confidence.

CAPTURE ENTIRE FACTORY AREA

Capture entire factory areas by combining drone photography with advanced laser scanning.

ALIGN WITH COORDINATE SYSTEMS

facility models aligned with your factory's coordinate system and, if needed, with national coordinate networks.

ENHANCE DESIGN AND MAINTENANCE

Significant advantages in design, maintenance, large-scale investment projects and communications.

HIGH-DEFINITION VISUAL SCANNING

We integrate laser scanning with drone photography.

ACCESS DIFFICULT AND HASARDOUS AREAS SAFELY

Enable safe and efficient access to hard-to-reach or hazardous areas
