

SolidComp's Products & Services

GEO RADARING

Geo Radaring provides valuable insights into underground structures that are otherwise invisible. It accurately detects pipelines, cables, foundations and other subsurface structures at depths of up to 4 metres.

GPR is a proven method to prevent costly surprises, reduce operational risks and improve efficiency in excavation, lifting operations, infrastructure maintenance and modernisation projects.

**Put your data to work
and reduce design costs
and site visits by 5–10%**

Your Trusted Partner

SolidComp is a full-service provider of high-quality 3D scanning solutions for industrial needs across the Nordic countries, and through our partner network, worldwide.

Our flagship product, Reality Twin™, is an exceptionally visual and precise digital twin, delivering an accurate virtual replica of industrial environments. We offer solutions for production plants, engineering firms and equipment manufacturers, enabling them to work more efficiently, safely, and with greater confidence.

ACCURATE MAPPING OF SUBSURFACE UTILITIES

Precisely locate buried pipelines, cables, and structural elements to prevent unexpected disruptions.

SEAMLESS INTEGRATION

All data is georeferenced, ensuring compatibility with your current planning and documentation systems

READY-TO-USE 3D SURFACE MODELS

Receive detailed 3D surface models from scanned data that provide immediate applicability within your preferred design software.

ENHANCED PLANNING AND SAFETY MEASURES

Identify potential risks early, improving planning accuracy and enhancing worksite safety.
