

Mobile access to Reality Twin for field work

REALITY TWIN™ FIELD

Reality Twin Field is a mobile application designed for industrial field use. It provides high-fidelity 3D visuals, asset information and on-site workflow support in a lightweight mobile experience.

Users can access the right equipment instantly, view documentation in context, and capture observations while work is being done, not afterwards.

Put your data to work and reduce design costs and site visits by 5–10%

Your Trusted Partner

SolidComp is a full-service provider of high-quality 3D scanning solutions for industrial needs across the Nordic countries, and through our partner network, worldwide.

Our flagship product, Reality Twin™, is an exceptionally visual and precise digital twin, delivering an accurate virtual replica of industrial environments. We offer solutions for production plants, engineering firms and equipment manufacturers, enabling them to work more efficiently, safely, and with greater confidence.

Mesh and point cloud access on mobile, with intuitive map-based navigation

Personal task lists: mark tasks complete, add notes, and move directly to the next item

Asset data and manuals on site: documentation and maintenance info available where needed

Area-based notifications for timely awareness in the field

Real-time tagging to record observations and link them to the physical environment

Straightforward user and group access management; licences support an unlimited number of users

Designed to complement existing asset management, not replace it
